PROFESSIONAL SUMMARY

Data Architect and analytics professional expanding into software engineering, building real hands-on evidence in Python tooling, automated testing, and version-controlled software systems alongside a data analytics and BI background. Experience spans BI platform migration (Tableau to Power BI), GitHub-based version control, semantic/ontology-based data modeling (Palantir Foundry), and test-driven development (pytest), with a track record of turning ad hoc scripts and manual processes into documented, tested, maintainable tools.

EXPERIENCE

L3HARRIS TECHNOLOGIES

September 2025 – Present

Data Architect

- Migrating enterprise BI reporting from Tableau to Power BI, translating DAX/LOD calculation logic and optimizing underlying SQL across multiple source systems (SSMS, Oracle SQL Developer).
- Designed and built a GitHub-based version-control system to govern Excel and MS Project macros, including a Python inventory/query tool (25 distinct query functions covering status, criticality, ownership, dependencies, and more) and a YAML-metadata-driven README generator.
- Authored 282 pytest unit and regression tests across the macro-governance toolset, achieving full function-level test coverage. Identified and resolved multiple real production bugs, including a silent data-filtering defect and a null-value crash, through test-driven debugging.
- Implemented Pydantic-based schema validation for structured YAML metadata and packaged the toolset as an installable Python package (src layout, pyproject.toml) with CLI entry points, turning ad hoc scripts into a deployable, validated tool.
- Built a personal Power Apps project tracker with Power Automate workflow automation to manage and monitor ongoing technical projects.

L3HARRIS TECHNOLOGIES

January 2021 – September 2025

Sr. Associate, Program Finance

- Tracked and analyzed program costs across multiple projects valued at over \$350 million by combining Cobra, PeopleSoft, and Excel.
- Developed data-driven reports and visual analytics to monitor and communicate weekly fluctuations in cost and labor metrics.
- Facilitated weekly Earned Value Management System (EVMS) meetings, using data analytics to compare labor and cost metrics against forecasts.
- Led analysis efforts for a \$40 million program for six weeks, stepping in as the interim lead analyst.
- Automated multiple weekly and monthly files, saving time and increasing efficiency.
- Executed various ad hoc tasks, such as developing funding forecasts and generating reports.

JUSTICE ADMINISTRATIVE COMMISSION

July 2016 – January 2021

Budget Analyst

- Conducted budget and expenditure analyses for more than 50 State agencies to facilitate accurate forecasting.
- Designed and delivered comprehensive training presentations to State Attorney's Offices, Public Defender's Offices, and other judicial related State entities.
- Optimized budget transaction processing by developing and implementing a streamlined workflow, increasing efficiency by 80% within the State's accounting system.
- Coordinated and consolidated various budget and forecasting documents from more than 50 State agencies to produce and submit the nearly 3,000-page Legislative Budget Request to the Governor's Office.

EDUCATION

WESTERN GOVERNORS UNIVERSITY, Master of Science, Data Analytics

FLORIDA STATE UNIVERSITY, Master of Business Administration

FLORIDA A&M UNIVERSITY, Bachelor of Science, Business Administration

CERTIFICATIONS

- Microsoft Training Associate: Database Fundamentals (Database design, normalization, SQL basics)
- Google Data Analytics Professional Certificate (SQL/BigQuery, R, Tableau, statistical analysis)
- Alteryx Core Certified (End-to-end ETL, analytic process automation)

TECHNICAL SKILLS

Programming & Scripting: Python, SQL, R, YAML

Software Practices: Git, GitHub (version control), pytest (unit/regression testing), Pydantic (schema validation), Python packaging (pyproject.toml), CLI/Terminal

Data Platforms & Modeling: Palantir Foundry/AIP (ontology, Workshop, Functions), Power BI (DAX, Power Query/M), Alteryx Designer, SAS (SAS Studio, SAS/STAT)

Databases: PostgreSQL, MySQL, SSMS, Oracle SQL Developer

BI & Visualization: Tableau, Power BI, Excel (Power Pivot)

Low-Code Automation: Power Apps, Power Automate
